Flowtix WFL

WAREHOUSING • FULFILLMENT • LOGISTICS

Move Smart. Fulfill Faster. Deliver Better.

Warehousing, Fulfillment & Logistics Management

Move Smart. Fulfill Faster. Deliver Better.

Flowtix WFL is an Evesys Technologies product concept bringing warehouse execution, stock visibility, order fulfillment, delivery coordination and management analytics into one connected platform.

Platform at a glance

Warehousing	Fulfillment	Logistics
Multi-site / bin control	Pick, pack and ship	Fleet, dispatch and POD
Inventory traceability	Order and return flows	Routes and delivery tracking

Core capabilities

Warehouse Management — Multi-location warehouses, aisles, racks, bins, receiving, put-away and cycle counts.

Inventory & Traceability — Stock by location, lot, batch, serial and expiry with reservations and movement history.

Order Fulfillment — B2B/B2C order allocation, wave picking, packing checks, labels and shipment release.

Transport & Delivery — Carrier allocation, fleet scheduling, route planning, tracking and proof of delivery.

3PL & Customer Portals — Client-specific stock ownership, service charges, SLAs and customer visibility.

Returns & Reverse Logistics — Return authorizations, inspections, disposition, restocking and claims.

Mobile Operations — Responsive warehouse screens, barcode/QR workflows and scanning device integration.

Smart Planning & Analytics — Replenishment suggestions, demand trends, exception alerts and operational scorecards.

Integrations & Automation — REST API, ERP/e-commerce links, courier connectors and configurable approval flows.

Smart operational workflows

1. **Inbound and receiving:** Purchase order or ASN validation, supplier receipt, quality hold and directed put-away.

2. **Warehouse execution:** Bin-level movements, replenishment, stock counting, barcode scanning and audit tracking.

3. **Fulfillment:** Channel order import, stock allocation, picking wave, packing verification, carton labels and dispatch confirmation.

4. **Transport execution:** Carrier assignment, route/load planning, delivery status, exceptions and proof of delivery.

5. **Returns:** Authorization, receipt, inspection, restock/quarantine and return reconciliation.

Intelligent and integration-ready capabilities

Configurable alerts for shortages, aging orders, underutilized space and delayed deliveries; suggested replenishment and order prioritization; role-based dashboards; analytics by warehouse, customer, order and route.

Integration options include ERP and accounting software, e-commerce platforms, courier partners, handheld scanners, label printers and APIs. AI-assisted forecasting and route optimization are proposed advanced options and require customer-specific integration and data validation.

Who it serves

Manufacturers and distributors • E-commerce and omnichannel merchants • Wholesale and retail businesses • 3PL providers and fulfillment centers • Import/export and logistics operators.

Implementation approach

Discover operational processes → Configure warehouses, users, items and customers → Migrate opening inventory → Integrate channels, devices and carriers → Run controlled warehouse UAT → Train teams and launch by location.
